# Complete landing-site candidate register

All higher- and medium-evidence candidates inside the Northern Corridor Atlas footprint

## Screening criteria used for the current dataset

Road classes: motorway, trunk, primary, secondary

Mapped path length: 600 to 2500 m

Straightness ratio: at least 0.985 (endpoint chord / mapped path)

Maximum lateral deviation from chord: 18 m

Accepted explicit surfaces: asphalt, concrete, concrete:lanes, concrete:plates, paved

Tagged width: at least 12 m; unknown width is retained

Excluded: bridge, tunnel, covered, ford, cutting, embankment, construction, proposed, abandoned,

disused, or access=no. The current built dataset requires a known accepted surface.

Supplemental known Finnish road bases are retained as higher-evidence references and bypass automated screening.

## How to read the register

Countries are alphabetical; every country is sorted strictly north to south.

* marks a candidate plotted on an atlas sheet after map-spacing thinning.

Sh is the midpoint sheet; Q is evidence quality: H=higher, M=medium.

Length follows the mapped road path. Width and surface are OSM tags; - means unknown.

Midpoint is WGS 84 decimal latitude/longitude, compacted as lat/lon.

A short ruled field is retained for handwritten notes.

### Coverage: 31,931 candidates - 29 higher - 31,902 medium - 478 plotted on atlas

Estonia: 2,357  Finland: 15,253  Latvia: 3,523  Lithuania: 272  Norway: 972  Russia: 9,478  Sweden: 76

*Candidate snapshot: 2026-10-20T12:39:16.706640+00:00  Register: 2026-10-26T20:52:33.402506+00:00*

### Screening limitation

Gradient, obstacles, pavement condition, traffic control, permission, weather and current availability are not evaluated.

These entries are not surveys, approvals, or safety determinations. Verify every factor independently before operational use.

# Estonia - landing-site candidates
